In one embodiment, the at least one film forming agent may be chosen from water soluble compounds, oil soluble compounds and compounds soluble in organic solvents. According to the present invention, the at least one film forming agent may be present in an amount generally ranging from 0.01% to 30% of active material by weight relative to the total weight of the composition, such as from 0.1% to 10% of active material by weight. One of ordinary skill in the art will recognize that the at least one film forming agent according to the present invention may be commercially available, and may come from suppliers in the form of a dilute solution. The amounts of the at least one film forming agent disclosed herein therefore reflect the weight percent of active material.

Please replace the first full paragraph at page 11 with the following paragraph.

Other non-limiting examples of the at least one film forming agent include copolymers derived from (i) at least one vinyl monomer comprising at least one
